

NAEMO Workshop Session

Identification of knowledge gaps associated with the management of blue mussels.

“Within the mussel industry and research community, what questions are we all asking?”

We would like participants to identify the knowledge gaps or research needs that exist for the management of the blue mussel in the North Atlantic area. Please can you categorise these according to the following themes :

- *Population (general declines in population range, loss of seed beds or settlement trends etc.)*
- *Threats (eg ocean acidification, climate change, anthropogenic inputs etc.)*
- *Management/Mitigation (eg monitoring, restoration, conservation zones, research, innovation etc.)*
- *Aquaculture*
- *Other*

For each theme, where possible please try and provide an issue which represents the viewpoint of the various sectors in your group (Industry, research, public agency)
